

Casement Base - Profile / Edge Detail

A range of base profiles & edge details are available to match across other chant door hardware products. However due to restrictions in space available the edge detail is limited to Square Edge (A) and Line (B).

Where possible the base edge detail should match that of the handle ie. 'Line' style products should be matched to P1-B and Radius should be specified with matching P3-A.

To order:

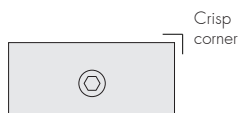

- Step 1: Specify the outside edge profile, this determines the outside shape of the base you require, P1, P2, P3

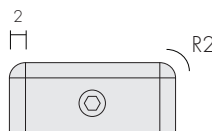

Edge Detail

- Step 2: Specify the edge detail A or B. Ordering example: P1-A.

A - Square edge

B - Line - 2mm edge / corner rad.

Handing of Casement Fasteners

Casement fasteners are handed left (LH) or right (RH) regardless of whether the window is hinged from the side (casement) or from the top (awning). Small awning windows would have the casement positioned in the centre of the window.
