① Lock & Plate Length Pairing (Select lock & plate series e.g. C30)

Locks require a minimum length of plate to incorporate the specific lock measurements of pitch (P) and fixing centres. Refer to the table below and to examples on the following page for more information.

Passage function - Long plates - Levers require lock reference information as this detail determines the lever position on the plate. Specify function codes '0/5' for the function itself.

Lever position Y - This ref. is based on the shortest plate length for a specific lock and plate combination. The lever position (Y) extends when used with shorter pitched locks on longer series plates to provide a balanced aesthetic between the lever and any plate function.
