

Standard Flush Pull Profiles - No Edge Detail (P1 - P5, 2mm Flange)

Standard pricing applied to these edge details

As always Chant flush pulls can be manufactured in a range of edge profiles. Due to the range of options we have simplified the coding structure. All products with square profile ending with '1' represent square edge detail only. To order shaped profiles substitute the '1' code for a '0' and add the edge detail notation. Contact us for the inventory list of square (1) and shaped profile (0) codes for your purchasing order systems. Use the Chant Sliding Door order forms for ordering flush pull products where possible.

- All 'P' profiles are available at standard prices and have 2mm thick flanges unless otherwise required for narrow doors.
- These edge details are available on all flush pull products.
